🐙 github.com/Min3th    🔗 linkedin.com/in/mineth-weerasinghe    🌐 mineth.space

I am a passionate Computer Science and Engineering undergraduate with a strong interest in software engineering. I am a team player, willing to commit and take responsibility for the task at hand.

### EDUCATION

|                                                                                          |                |
|------------------------------------------------------------------------------------------|----------------|
| <b>University of Moratuwa</b><br>BSc Eng Hons, Computer Science and Engineering          | 2022 – Present |
| <b>Lyceum International School – Panadura</b><br>AL 2020   3A   IR – 731<br>OL 2017   9A | 2008 – 2019    |

### WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>WSO2 Pvt Ltd – Software Engineer Intern</b><br><i>React   Redux   MUI   Ballerina   MySQL   Asgardeo   Choreo</i>                                                                                                                                                                                                                                                                                                                                                                                         | 2025 Jan – 2025 Jun |
| <ul style="list-style-type: none"><li>Developed the WSO2 Visitor application end-to-end, covering both frontend and backend implementations for tracking on-premise visitors.</li><li>Developed a mobile microapp for the Visitor Application to include in the WSO2 Super App.</li><li>Participated in code reviews and security reviews.</li><li>Conducted comprehensive threat modeling and security reviews to identify and mitigate high-risk vulnerabilities prior to production deployment.</li></ul> |                     |

### TECHNOLOGIES

|                               |                                                                          |
|-------------------------------|--------------------------------------------------------------------------|
| <b>Web Development:</b>       | HTML, CSS, Tailwind CSS, React, Flask, .NET, ViteJS, NextJS, Spring Boot |
| <b>Database Management:</b>   | MySQL, MSSQL, MongoDB, Supabase                                          |
| <b>Version Control:</b>       | GitHub, Git                                                              |
| <b>Programming Languages:</b> | Python, Java, C++, JavaScript, Ballerina                                 |
| <b>Cloud Services:</b>        | AWS, Choreo, Vercel                                                      |
| <b>Machine Learning:</b>      | PyTorch, Scikit-learn, Pandas, Hugging Face                              |
| <b>Software Testing:</b>      | Jest, Cypress, Google Lighthouse                                         |
| <b>Other Tools:</b>           | Asgardeo, Xilinx Vivado, Android Studio, Material UI                     |

### PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                    |

| <i>Spring Boot   React   MySQL   AWS</i> <ul style="list-style-type: none"><li>Developed a full-stack subscription management platform using Spring Boot, React, TypeScript, Redux Toolkit, and MySQL.</li><li>Implemented secure JWT authentication with Google Sign-In, role-based API protection, and CICD pipelines.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                    |

- Built scheduled background services to detect upcoming renewals and send automated email notifications using SendGrid.
- Designed analytics features to track recurring expenses, categorize subscriptions, and estimate future subscription costs.

3. Worker Trust System

Supabase | React Native | NodeJS

2025 Nov – 2025 Dec

- Developed a mobile application to help users find reliable service workers such as plumbers and electricians through location-based search and trust scores.
- Implemented worker profiles with ratings, reviews, and service request functionality.

4. GitFraud Analyser

Python | Hugging Face

2025 Nov – 2025 Dec

- Developed a tool to detect fake commits used to artificially populate Git contribution graphs.
- Analyzed commit history and returned a percentage similarity score using heuristic and LLM-based methods.

5. Anonymous Thoughts

NextJS | NodeJS | MongoDB | Vercel | MUI

2025 Aug – 2025 Dec

- Built an anonymous content-sharing platform for posting thoughts and reflections securely.
- Used a Hugging Face NLP model to flag and prevent personal attacks.
- Used Jest for unit testing and Cypress for component testing.

6. Neurohire

React | MySQL | Gemini API | Python | MUI

2025 Mar – 2025 Jun

- Built an AI-powered resume screening system to help companies manage job postings and applications.
- Integrated Google Drive for storing resumes and used a RAG pipeline to filter appropriate CVs.

7. Inventory Management System

MySQL | React | .NET | Jest | Azure | Tailwind CSS

2024 Jul – 2024 Nov

- Developed a system for universities and institutions to track computer laboratory equipment.
- Built complete mobile and web applications with testing using Jest and Cypress.

CERTIFICATIONS

- Spring Boot 4, Spring 7 & Hibernate for Beginners
- Supervised Machine Learning: Regression and Classification
- Advanced Learning Algorithms
- Unsupervised Learning, Recommenders, Reinforcement Learning

VOLUNTEERING & LEADERSHIP

|                                                                                                                         |                     |
